

AI · PROJECT BRIEF

Cosmetic Product Selling Web App

Prepared by Crescentek

The project aims to create a sophisticated web application tailored for selling cosmetic products effectively. It targets beauty enthusiasts and enhances user interaction through intuitive dashboard features for product management and sales analytics.

PROJECT OVERVIEW

The project aims to create a sophisticated web application tailored for selling cosmetic products effectively. It targets beauty enthusiasts and enhances user interaction through intuitive dashboard features for product management and sales analytics.

EXECUTIVE SUMMARY

Crescentek is embarking on a project to develop a cosmetic product selling dashboard web app, addressing the significant demand for online beauty products. Our approach leverages modern technologies like Next.js and Node.js to ensure a responsive and engaging user experience. The onboarding of PostgreSQL will guarantee reliable management of product data. The expected impact includes increased sales potential, streamlined shopping experiences, and valuable insights from the dashboard analytics module.

WHY CRESCENTEK

Crescentek brings 14+ years of experience delivering 3,200+ projects across diverse industries. Our team of senior engineers, designers, and project managers will ensure your project is delivered on time, on budget, and to the highest quality standards. We specialise in building scalable, future-ready software that grows with your business.

PROJECT OBJECTIVES

The objectives below define the key outcomes this project must achieve. They guide scope decisions, ensure every feature contributes to usability, performance, and security, and serve as acceptance criteria for milestone sign-off.

#	Objective	Description
01	Responsive UI Showcase	Create a user-friendly interface that adapts to different screen sizes, improving the overall user experience.
02	Real-time Product Management	Implement functionality for real-time updates on product availability, essential for maintaining customer trust and satisfaction.
03	User Authentication System	Ensure secure user management through a robust authentication system that keeps user data safe.
04	Integrated Payment Gateway	Incorporate a reliable payment processing system for seamless transactions, critical for user conversion rates.
05	Analytics Dashboard	Develop tools to analyze sales performance and user engagement trends, aiding in strategic business decisions.
06	High-Performance Backend	Utilize Node.js to create a backend that can efficiently handle multiple concurrent users and operations.
07	Structured Product Database	Design an organized database schema in PostgreSQL to manage product data efficiently and ensure fast retrieval.

PROJECT GOAL

The primary goal is to deliver a robust minimum viable product (MVP) that facilitates online cosmetic sales while providing users with essential tools for managing their purchases and preferences. This will enhance the client's market reach and customer satisfaction levels.

SUGGESTED ARCHITECTURE

The proposed architecture involves a client-server model where Next.js serves as the frontend for dynamic content delivery, while Node.js handles the backend operations with PostgreSQL as the relational database. This design allows for scalability and flexibility, making it easier to introduce new features or expand existing ones as the user base grows.

PROJECT REQUIREMENTS

PROJECT TYPE	Web Application
PROJECT DESCRIPTION	i want to create a cosmetic product selling website.
TIMELINE	mvp

SUGGESTED TECH STACK

THIRD-PARTY

Payment Gateway Services (Stripe or similar)

Analytics Tools (Google Analytics or similar)

CORE DETAILED FEATURE LIST

Feature	Description
User Authentication	Secure user registration and login functionality, allowing customers to manage their profiles and purchase history.
Product Catalog	An organized listing of cosmetic products with search and filter capabilities to enhance user accessibility.
Shopping Cart Functionality	Enable users to easily add products to a cart and manage their selections before completing a purchase.

Order Management System	Provide tools for users to view their orders and track delivery status, improving overall customer satisfaction.
Payment Gateway Integration	Integrate a secure payment processing system to facilitate smooth transactions within the app.
Analytics Dashboard	A backend feature to present business analytics, helping the client understand sales trends and user behavior.
Admin Control Panel	An administrative interface for managing products, orders, and user accounts efficiently.

ESTIMATED TIMELINE & MILESTONES

Milestone 1 — Requirements Gathering & Planning

- Define project scope
- Identify key features
- User flow diagrams
- Technical specifications document

Milestone 2 — UI/UX Design

- Wireframes of main screens
- Prototype of user authentication flow
- Visual design mockups
- Usability testing report

Milestone 3 — Development

- Frontend development with Next.js
- Backend API implementation with Node.js
- Database schema setup in PostgreSQL
- Initial deployment on staging server

Milestone 4 — Testing & QA

- Functional testing reports
- Performance testing results
- User acceptance testing feedback
- Bug fix confirmation

Milestone 5 — Launch & Support

- Production deployment
- User training sessions
- Documentation of features
- Post-launch support plan

This project is structured across 5 milestones — from Phase 1: Requirements Gathering & Planning through to Phase 5: Launch & Support. Each milestone builds on the previous, ensuring a controlled, iterative delivery with clear sign-off criteria. Crescentek recommends regular progress reviews at every milestone gate to maintain alignment, manage risk, and ensure on-time delivery.

RECOMMENDATIONS & NEXT STEPS

1. Consider implementing a loyalty program to incentivize repeat purchases.
2. Explore social media integration for marketing and customer engagement.
3. Adding AI-driven product recommendations based on user preferences.
4. Consider mobile-first design principles to enhance accessibility for all users.
5. Schedule a project kick-off meeting with stakeholders.
6. Gather detailed user requirements through interviews or surveys.
7. Finalize the technical specifications document.
8. Begin initial design work, focusing on UI/UX elements.
9. Set up the project's development environment and necessary tools.

— A NOTE FROM US —

Thank You.

for the opportunity to present this proposal.

We are excited about the possibility of partnering with you. Our team at Crescentek is ready to bring your vision to life with precision, creativity, and dedication. Let's build something extraordinary together.

— With gratitude,

The Crescentek Team
